History Initially, AutoCAD Cracked Accounts's only target market was desktop CAD in the workplace. However, as advances in computer processing speed and hard drive storage capacity accelerated, AutoCAD slowly migrated to a broader user base, spanning architecture, engineering, and manufacturing. In 2003, AutoCAD's role as a desktop CAD program was overtaken by competing products, notably FreeCAD and Google SketchUp. In recent years, AutoCAD's role has changed significantly, and it is now often viewed as a set of tools used by industrial designers in product development. Originally, AutoCAD was sold directly to end users through Autodesk's own Autodesk Corporation sales force. However, during the 1990s, Autodesk focused increasingly on developing, marketing, and selling AutoCAD to third-party distributors and resellers who sold the software to end users. Since 2003, AutoCAD has been a commercial product sold directly to end users by Autodesk, except in the United States and Canada. In 2011, Autodesk announced the planned release of AutoCAD LT (non-commercial or "lite") and AutoCAD Web Edition (commercial). In April 2014, Autodesk introduced a new cost model for both AutoCAD and AutoCAD LT, and also began offering AutoCAD LT as a perpetual license. An early editor known as "AutoCAD 3D" was created as a research project in the 1960s at Pratt Institute's Human Factors Division. It was never completed, but an incomplete early version was discovered in a basement after the University of Utah took over Pratt's facilities in 1973. However, the program was not distributed to the public at the time. History AutoCAD was originally developed at the Pratt Institute's Human Factors Division by Ray and Art Toren, who later became the founding president of Autodesk in 1979. They were joined by Steve Carr, Pete Grady, Ken Jones, Larry Owen, and Bill Parks, among others. On March 22, 1982, AutoCAD was introduced to the public and the software was manufactured by Autodesk. Autodesk was initially a small company with fewer than 30 employees, but over the years it has grown to over 1,000 employees, with an annual revenue exceeding \$1 billion. It is currently headquartered in San Rafael, California. AutoCAD was initially a desktop app that ran on a variety of hardware, including a variety of microcomputers

Need to find out who has the biggest house? – see how you rank! This is a post about ranking houses and apartments. It's not even 5 years old yet! I first wrote this back in 2011 for a school project. It used DB2 as it was the fastest option at the time, but I've since moved on to MySQL. I originally wrote this in SQL, but then moved it over to PL/SQL. A lot has happened since then, and we've since released products on top of the code. This post is a bit of a retrospective and introduces you to some new features. I've put this in a read-only mode for now, as I'm sure you'll all enjoy it ?
How to rank your house You start by retrieving all the houses in your neighbourhood, and ranking them from biggest to smallest. CREATE OR REPLACE PROCEDURE rank_houses (houses_list IN OUT SYS_REFCURSOR, house_id IN NUMBER) IS local_house sys_refcursor; BEGIN OPEN houses_list FOR SELECT house_id, house_name, house_sqft, floor_area FROM houses WHERE house_id = :house_id ORDER BY floor_area DESC FETCH FIRST 5 INTO local_house; EXIT WHEN local_house%NOTFOUND; END; The above will show the houses in order by the largest one first. To get the smallest houses first, all you need to do is add a little order by clause... SELECT house_id, house_name, house_sqft, floor_area FROM houses WHERE house_id = :house_id a1d647c40b
