Pomodoro Serial Key is a small software application whose purpose is to help you monitor and time different activities with the aid of a timer. It can be deployed on all Windows versions out there. In order to run the program correctly and avoid bumping into all sorts of errors, you need to deploy Microsoft.NET Framework 3.5 on the target computer. The utility is portable so you can keep it stored on pen drives or other portable devices to carry it with you all the time. Plus, you may gain access to its GUI with a simple double-click on the executable file. System tray running mode The tool can be controlled via the system tray. In order to view its configuration settings, you need to right-click on its tray icon. Plus, you are allowed to start or stop the timer using simple actions. The application is able to show the remaining time via its tray icon, and you can view the time expressed in minutes and seconds. Configuration settings Pomodoro offers you the possibility to enable or disable ticking sound (which is played in the background when the timer is activated), show or hide the time counter via the system tray, as well as view popup notifications and play audio alerts when the time is up. The timer can be configured by specifying the time in minutes, and you may also assign a custom name to each session. What's more, you are allowed to interrupt the timer and give a specific reason, resume the timer, and check out statistics about each session (with details about the name, end date, duration, and interruptions). Other important configuration settings worth being mentioned enable you to reset the timer when you interrupt the current session, ask for a reason why you want to interrupt the activity, set the maximum interruption duration, as well as activate alarms upon breaks. Final words In conclusion, Pomodoro helps you keep an eye on the time needed to finish certain tasks on the fly, and can be configured by rookies and professionals alike. The goal of this article is to introduce you to two very different and equally useful utilities that may also be of use to you as a professional content creator: NAPSTER and CUBE. These programs work in a similar way. They enable you to analyze files and folders on your hard disk in real-time. If you know what content analysis is, you can be forgiven for believing that it's a more powerful version of a video grabber. In fact, the difference lies in the visualization method that the application employs, in the fact that it can detect content of any size, and, perhaps even more importantly, in the way the results of the analysis are presented to you. NAPSTER The application is available for a wide range of computers running a standard Windows operating system: from Windows 95 to Windows 7 and Windows 8. In order to use NAPSTER, first download the application from the official website, then run it. There are three main windows on the screen: The main interface enables you to choose the type of analysis (for example, encoding type or file type) that you want to perform. From the main window you may also configure basic parameters such as the number of files or folders that you want to select and the amount of memory that the tool can occupy. If you have made all the necessary adjustments, you can click the start button. When the analysis begins, you are presented with the following window: Here you can view the analysis results. NAPSTER has a filter option in which you may choose any file type, for example, wmv, mp3 or mp4. The filter settings are displayed in the top right part of
