What's New In AutoCAD?

As our team built out our design team, we realized that the amount of feedback we were sending to the design team via email was taking up a large amount of time and a large amount of storage space. We wanted to do something to save time and space, but also to improve the accuracy and speed of the feedback we send back and forth. This is where Markup Assist and Markup Import come in. Markup Assist is a powerful new tool that allows you to send feedback about a drawing directly to your design team via email. There are no more drawings and emails to email. Just send feedback directly from the drawing. By moving the feedback directly to the drawing, you also don't have to store it in email, your drawing, or in an external file. The drawing, email, and external file all contain the same information, it's just spread over a couple of different places. Markup Assist will also store all feedback you send so that it can be re-used in future drawings. The information you send via Markup Assist is marked up with callouts, text, and images. You can send markup as an attachment with Markup Assist, or you can send it inline within the drawing. All of the information can be accessed from the Drawing Manager. Markup Assist uses the same feedback that you add manually to the drawing to ensure accurate and consistent information in all future drawings. It also allows you to send feedback via email to the entire design team. All of this is done automatically. Adding feedback in AutoCAD is a long process. First, you mark up the drawing with your feedback. Then, you send the marked-up drawing to your design team. Then, the design team lets you know if they have any changes to your drawing. Then, you send them the new drawing to incorporate the changes. This process continues for each change to the drawing, and again and again and again. All of this process has been broken down in to a single process with Markup Assist. Markup Assist is one part of Markup Assist and Markup Assist Pro. Markup Assist Pro gives you the ability to markup other drawings outside of AutoCAD. You can add feedback from a 3D model to a 2D drawing, or vice versa. You can markup a 2D drawing from a 3D model, or markup a 3D model from a 2D drawing. Markup Assist and Markup Assist Pro are only available in
